PROFESSIONAL SUMMARY

Builder-educator who ships: I proved the craft by hand first, then had the vision to systematize it with AI. Before AI I was one of my bootcamp's most-requested instructors and demo presenters, rebuilt customer success for hundreds of accounts, and conceived and ran the Tech Residency, an 8-week program I built into the company's flagship product; after launch, roughly 70% of hired graduates came through it, raising the overall hiring average. Then I went deliberately AI-native, mastering Claude Code and building EngineOS, an AI operating system of 36 custom skills run daily to ship client-grade enablement, research, and CRM work. Capability and vision first, AI a mastered multiplier shown through artifacts. Fifteen years of Michelin-tier kitchen leadership underneath. US work-authorized; no sponsorship required.

CORE COMPETENCIES

Core Capabilities: Curriculum and program design from zero, customer education and enablement, demo and sales-enablement craft, customer success and lifecycle operations, retention analytics and early-warning systems, implementation and solutions engineering, employer and partner network building, AI systems architecture and workflow automation

Technical Stack: Claude Code and AI agent orchestration, Python, React, SQL, Flask, REST APIs and MCP servers, CRM systems (Attio, HubSpot, Salesforce), Zapier, Make, Notion, Git, interactive HTML and DOCX generation pipelines

PROFESSIONAL EXPERIENCE

Coding Temple | Chicago, IL

EdTech SaaS: software engineering bootcamp and workforce-development platform

Founder & Product Manager, Tech Residency | Feb 2025 - Aug 2025

- Conceived and ran the Tech Residency: as Product Manager, built it from an idea into the company's flagship 8-week experiential product, ran the first cohorts myself, then scaled it with an added instructor and the playbooks that made it repeatable.
- Owned employer-partner business development end to end: recruited outside employer-clients to submit real MVP projects and paired them with student dev teams. Employers consistently cited the Residency as their key hiring differentiator.
- Ran it every 8 weeks at 10 to 30 per cohort, with automated setup that cut per-cohort configuration from 4 hours to 15 minutes. After launch, roughly 70% of hired graduates came through the Residency, raising the overall hiring average.

Customer Success Manager & Careers Lead | Nov 2023 - Feb 2025

- Rebuilt career services and customer success from scratch for hundreds of accounts (onboarding, hiring-partner pipelines, coaching frameworks), cutting advisor touchpoints 20%+ while hitting record placement rates.
- Designed a retention-analytics system that flagged at-risk learners two weeks earlier, lifting graduation and placement rates 12%, and built the Notion, Zapier, and Make systems that unified scattered tools and gave the team full visibility into the student journey where there had been none.

Associate Instructor | Mar 2023 - Nov 2023

- Delivered full-stack curriculum and live instruction to cohorts of hundreds, recognized by the founder for teaching effectiveness and among the program's most-requested instructors and demo presenters. Earlier, as a Full Stack Web Developer (2022 to 2023), built 3 production web apps in React with Flask and PostgreSQL.

Independent Solutions Engineer & AI Systems Builder | Chicago, IL (Remote)

Solutions engineering, enablement, and applied-AI consulting

Independent Consultant & AI Systems Builder | 2025 - Present

- Had the vision to systematize my own craft into a reusable AI operating system built from scratch: EngineOS, 36 custom skills across 900+ files, run daily in real client work to deliver research, competitive intelligence, and CRM automation.

- Deliver consulting engagements and self-directed builds while pursuing a full-time role, alongside confidential client work on private, access-gated hosting.

Anchor Engagement: Wonda VR, Solutions Engineer (Fractional, completed) | Oct 2025 - Mar 2026

- Fractional solutions engineering for a healthcare EdTech SaaS (VR medical-education simulation): built a 6-stage renewal methodology producing 11 deliverables per account, from usage analysis and expansion opportunities through QBRs and proposals.
- Audited CRM health (scored 1.8/5), found 9 duplicate clusters and 84% disconnected records, and built an automated ingestion agent that restored data integrity; produced competitive-intelligence deliverables scored 9.5/10.

Chicago Restaurants (Multiple) | Chicago, IL

Michelin-starred fine dining

Chef & Culinary Operations Leader | 2005 - 2020

- Led 20+ person brigades through 15 years of high-pressure Michelin-starred service as one of Chicago's highest-paid sous chefs, building the training and standards-of-execution systems that held excellence through turnover and volume swings.

EDUCATION

Loyola University New Orleans | New Orleans, LA | B.A. Computer Science

Coding Temple | Chicago, IL | Full-Stack Software Engineering Certificate | 2022

Le Cordon Bleu | Chicago, IL | A.A. Culinary Arts

PROJECTS

EngineOS (AI operating system, self-built)

36 custom skills, 85 patterns, and 39 capabilities across 4 engine tenants plus a sandbox tier. Two-layer governance architecture with six MCP integrations (Attio, Bright Data, Puppeteer, Context7, Notion).

Public, hosted artifacts (live samples)

- SaaS product walkthrough that makes a complex platform clear in minutes: seanecurrie.github.io/on-demand-curriculum/fresha/
- EngineOS documentation site explaining a complex AI system with zero PII: seanecurrie.github.io/on-demand-curriculum/engineos-docs/
- Veeva vs Salesforce life-sciences CRM comparison and SME dossier: seanecurrie.github.io/on-demand-curriculum/veeva-vs-salesforce-ls-crm/

Client-grade work (confidential, described without names)

- Investor-analysis suite: an SME-iteration loop plus a claim-by-claim read of a ~24-slide investor deck, on a private, access-gated site.
- Private SaaS product and code review for an unlaunched startup, plus hosted, reader-specific company briefings.

trading-assistant (working software)

A working Flask and Anthropic-SDK application of roughly 5,600 lines that runs locally, proof of shipping real software, not just prompts.
